

FOR SAGE 200

Web → SUBSCRIPTION

Ideal where staff work in various locations or remotely, our Eureka Addons Web Subscription enables browser-based access for order processing and requisition tasks anytime, anywhere and without the need for additional Sage 200 licences.

Designed to expand the capabilities and functionalities of Sage software, Eureka Addons allow you to streamline your business processes.

Bundled up into handy monthly subscription subscriptions to suit different business needs, Eureka Addons are proven to deliver significant time & cost savings, whilst improving internal procedures and customer service, freeing up resources to reinvest in achieving business goals.

Eureka Addons included in the Web Subscription:

Web Orders

Web Orders for Sage 200 allows multiple users to quickly enter sales and purchase orders into the Sage 200 suite via a web interface, eliminating the expense of additional Sage 200 licences for these tasks. The data accessed is in real-time, and any orders created remotely are immediately visible in the system.

Web Purchase Order Requisition

Web Purchase Order Requisitions for Sage 200 enables you to create, amend and manage purchase requisitions, anytime and anywhere, via a web interface quickly and easily. Submitted requisitions can be subject to single, multiple or project manager approval, and purchase requisition reports can be created directly from Sage 200, using the Standard Sage 200 Report Designer.

WEB ORDERS for Sage 200

Create sales and purchase orders in Sage 200 on the move.

Web Orders for Sage 200 has been designed to allow users to quickly enter sales and purchase orders into the Sage 200 suite via a web interface.

You can download this Addon as part of the

Web
SUBSCRIPTION

& FEATURES & BENEFITS

ENTER ORDERS VIA A WEB INTERFACE

Multiple users can quickly and easily create sales and purchase orders via a web interface, streamlining the order entry process and improving business efficiency.

POWERFUL SEARCH FUNCTIONALITY

Quickly look up customer & supplier details, check stock, and view sales & purchase orders in Sage 200 in real time.

USER PERMISSIONS

Administrators can control access to the system via user permissions restricting access only to the relevant people. Nominal code access can also be restricted per user.

& FEATURES & BENEFITS

MIMICS SAGE 200 PURCHASE ORDER PROCESSING & SALES ORDER ENTRY

With Web Orders you can enter stock, free text, comment lines and additional charges via a web interface that mimics Sage 200.

ACCESS REAL-TIME DATA

View up to date and accurate information from the Sage 200 Suite without any need for synchronisation.

MULTI-COMPANY ACCESS

Functionality available across all Sage 200 companies from within the one interface. Users can quickly change company at the click of a button.

ACCESS ANYTIME, ANYWHERE

Web Orders is installed on and runs from your server, permitting remote and mobile user access - perfect for companies with different branches, warehouses or staff that need access on the move.

NO NEED FOR ADDITIONAL SAGE 200 LICENCES

Web Orders uses remote Sage 200 user access eliminating the expense of additional Sage 200 licences. This is ideal for companies that have many users who need to enter sales and purchase orders but don't require access to the rest of the system.

PROJECT ACCOUNTING FUNCTIONALITY

Links with Project Accounting in Sage 200, allowing the user to assign purchase order lines to specific projects.

CUSTOMISABLE USER INTERFACE

The look and feel of the web interface can be customised to include your company branding or to reflect your company website, making the system familiar to end users.

ON THE GO

Web Orders is compatible with any browser enabled device allowing users to process orders on devices such as Apple, Android and Windows laptops, smartphones or tablets.

INSTANT UPDATES

If you create a sales or purchase order through the module, it will show immediately in Sage 200 and return the Sage 200 order number within the web interface.

“

"The Web Orders Addon has created a more robust authorisation process and given us a much greater degree of financial control.

We now have 150 user licences for the electronic purchase order system. Each person has a unique login and pin and the purchase order links directly to our supplier database which is held on Sage

We have different authorisation levels – operations managers and senior managers – and the system sends an email to the relevant manager and the ordering process can be monitored by the finance office."

**Margaret Monaghan | Finance Operations Manager
Jobs and Business Glasgow**

WEB PURCHASE ORDER REQUISITIONS for Sage 200

Web Purchase Order Requisitions for Sage 200 enables you to quickly and easily create, amend and manage purchase requisitions at anytime and from anywhere via a web browser.

This advanced system uses a simple web interface and integrates in real time with your Sage 200 suite.

Submitted requisitions can be subject to single, multiple or project manager approval for a more efficient and controlled authorisation process, with email notifications when a requisition is approved or declined.

TAKE CONTROL OF YOUR PURCHASE ORDER REQUISITIONS - ANYTIME, ANYWHERE.

A key feature of Web PO Requisitions is the ability to generate purchase requisition reports directly from Sage 200, using the Standard Sage 200 Report Designer. In addition, the system only requires a single web licence for Sage 200, making it ideal for companies with multiple concurrent users. These users can enter purchase requisitions and/or view purchase orders without the need to access the full Sage 200 system.

SUBSCRIPTION

& FEATURES & BENEFITS

ENTER PURCHASE REQUISITIONS VIA A WEB INTERFACE

Multiple users can quickly and easily create purchase requisitions via a web interface, which are automatically converted to purchase orders when approved, streamlining the PO entry process and improving business efficiency.

RECEIVE GOODS AGAINST PURCHASE ORDERS

Once the requisitions have been converted to purchase orders, users can receive goods via the web interface, updating Sage 200 in real time.

REMOTE ACCESS ANYTIME, ANYWHERE

Web PO Requisitions for Sage 200 is installed and runs on your server, permitting remote and mobile user access - perfect for companies with different branches, warehouses or staff that need access on the move.

& FEATURES & BENEFITS

POWERFUL SEARCH FUNCTION

Quickly and easily find what you are looking for with the multi-field search function. This can easily manage over 100,000 products.

MANAGE YOUR PO REQUISITIONS WITH FULL REPORTING

All of the Web PO Requisitions tables are available for reporting using the standard Sage 200 Report Designer.

REAL-TIME ACCESS TO SAGE 200 DATA

View live information from Sage 200, including supplier details, pricing, stock levels and existing purchase orders, without any synchronisation.

ATTACH FILES TO PURCHASE REQUISITIONS

Upload documents or images against purchase requisitions to provide further details on the goods and services required.

ADAPT TO SUIT YOUR BUSINESS

The user interface can be customised to reflect your company branding, ensuring end users adopt the system seamlessly. You can also access your PO requisitions easily through your company Intranet or platforms such as SharePoint.

PRINT PURCHASE REQUISITIONS

Users can print their purchase requisitions from this module if required, even before the purchase order has been created in Sage 200.

INTEGRATES WITH SAGE 200 PO PROCESSING & PROJECT ACCOUNTING

Our module looks and feels like Sage 200, allowing you to enter stock, free text, comments and additional charge lines. The corresponding purchase order is generated and subject to standard Sage 200 purchase order processing functionality.

MULTI-LEVEL AUTHORISATION

Single level, multi-level or project manager approval can be set up to authorise PO requisitions. The system can send notification emails to the authorisers to help manage the process.

DRAG AND DROP LINE ORDERING

Our user friendly interface allows you to easily amend purchase requisitions by a simple drag and drop action within the Create PO Requisition screen making it easier to move comment lines next to item lines.

“

“We have a large number of departments within our business and the management of the purchase order requisition process was very time consuming and unorganised.

We spent lots of time tracking down requisitions that were waiting to be approved as well as the time spent checking that we were ordering the correct items.

Since we started using Eureka Solutions’ Web PO Requisitions module we have cut this process in half and seen a massive decrease in errors.”
